

Sampling Schedule

	Sample 1	Sample 2	Sample 3
Time	Prior to first infusion	Within 4 hrs of completing Day 2 infusion	Within 4 hrs of completing Day 6 infusion
Volume	0.5mL EDTA	0.5mL EDTA	0.5mL EDTA
Test (Plasma)	Circulating TNF, PAF, IL-6, and IL-10 levels	Circulating TNF, PAF, IL-6, and IL-10 levels	Circulating TNF, PAF, IL-6, and IL-10 levels

Administration Guidelines

Compatibility	Stability	Administration
TPN solution (not lipid)	Administer via a 'Y' site as close to the insertion site as possible, no more than 10cm.	As an infusion, is light sensitive so the syringe will need to be covered by blue plastic like TPN.
Inotropes		No boluses down the line whilst it is being administered ie. treat like inotropes.
Glucose solutions		When the infusion is complete flush the line with 0.5mL of saline as an infusion.
Saline		
Morphine
